

## Losi 5ive-T / Spektrum SR3300T Antenna Length Notice:

1. This notice is for Losi 5IVE-T owners
2. DO NOT use any receiver other than the included Extended Antenna SR3300T (not the short antenna SR3300T)
3. If you need to replace your included stock receiver please read below and contact us

Due to the particular size of the chassis and surrounding components of the 1/5th scale Losi 5ive, Spektrum has created an extended antenna version of the 3300T specifically to overcome signal blocking and resulting range reduction in this type of installation. It is strongly recommended when operating the Losi 5IVE-T (LOSB0019BLKBD & LOSB0019WHTBD) using the originally proved long antenna version\* of the Spektrum SR3300T (SPMSR3300T) telemetry receiver. Use of another receiver could result in radio frequency signal interruption.

\* Extended Antenna length ~ 265mm

If a replacement for the originally supplied long antenna version SR3300T is needed, please contact Horizon Hobby Product Support.
