HANGAR 9®

Digital Servo & Receiver Current Meter

INSTRUCTIONS

- Use the switch to select between displaying current or voltage (you may change selections after connections are made)
- Make desired connection between the female universal lead and the male universal lead on your Digital Servo & Receiver Current Meter
- You may connect the current meter between the battery and the receiver, between the receiver and the servo, between the charger and the charge jack, or between the charge jack and a cyclor to test the current and voltage
