

SERVICE BULLETIN: SPM6400

November 10, 2016

Product: DX6R 6-Channel DSMR® Radio System

Issue: Closing the RaceWare™ application or opening a 3rd party application and not re-opening the RaceWare application will turn off RF transmission (sleep mode) at the pre-determined time limit (default 5 mins) if no inputs are made on the touch screen.

What To Do: Always keep the RaceWare application open and visible on the screen while driving to avoid losing RF transmission while driving.

THE RACEWARE APPLICATION WILL REMAIN ON AND WILL NOT STOP TRANSMITTING AS LONG AS THE RACEWARE APPLICATION IS ON AND VISIBLE ON THE SCREEN.

TIP: The Sleep Mode time can be manually set from 15 seconds to Never. Within the Android Operating System, go to, **Settings>Display>Sleep**. If you intend to drive while using other apps such as the calculator or Adobe Reader, it is recommended to reprogram Sleep Mode to Never.

Alternately, if WiFi is turned on in system settings, even if it is not connected to a network, the RF transmission will NOT turn off.
